

Cones, Nuts, and Seeds

Trees have different ways
to make new trees.

Some trees have cones.
Pine and spruce trees
grow cones.

Inside the cones are seeds.
When the seeds fall,
a new tree can grow.

Other trees make nuts.

The chestnut tree has
brown, shiny nuts.

Squirrels love
to eat nuts!

Many trees have seeds
inside fruits. An apple
has many small seeds

A seed is small, but it can
grow into a big tree.
